Introduction

Who are we?

We are a Students forum online called Helpya, where the students where the main objective is to share knowledge, class notes and exercises.

Functionalities

This application also includes functionalities like having a favourites section. For some of the functions on the app you must be registered on the page, this functionalities are:

- Making posts.
- Have a favourites section.
- Commentaries.
- Downloading / uploading files.
- Edit profile.

If you're not registered you have the next limited functions:

- Searching posts.
- See posts.
- Changing the theme of the page

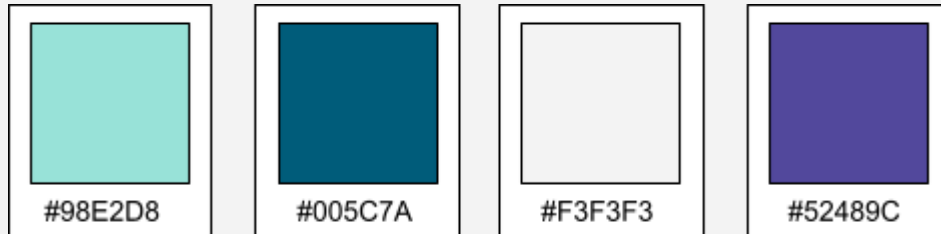

Target audience

Helpya's target audience is anyone who is studying or anyone who is interested in any educational course from ESO to university courses. We assume that the people who will use our application are between 15 and 26 years old.

Colours

We have two themes for the page: one light and one dark.

Light theme

Tiffany Blue

This colour is visible at:

- The background colour at header.
- The balloons info background at the landing page.
- At some buttons.
- Is present in some typographies.
- At the background of the personal messages.

Lapis Lazuli

We can see this colour at:

- The background colour at footer.
- In some buttons.
- At tags on posts
- At icons like user, search bar and
- The balloons info background at the landing page, user settings and user interface.
- Some typographies.

White smoke

Is the colour of the background of the body, the social icons and some typographies.

Ultra Violet

We can see this colour at:

- The colour of the div at the landing page which contains the information balloons.
- The background at the pages register, login and profile interface.
- The menu at search and favourites and the menu at friends and groups chat.

Photos and logos

Mobile logo

This is the logo that we find on mobile phones, it must have a size of 116px wide and 62.19px high.

Tablet and PC logo

This is the logo that we find on tablets and PCs, the only difference between these two interfaces is the size of the logo at header. In the tablet interface the size is 130px wide and 86px high. In the pc interface the size is 136px wide and 90px high.

Image login

This image can be found on the login page. The image takes up all the space in the window 100% in all formats.

Header at pc

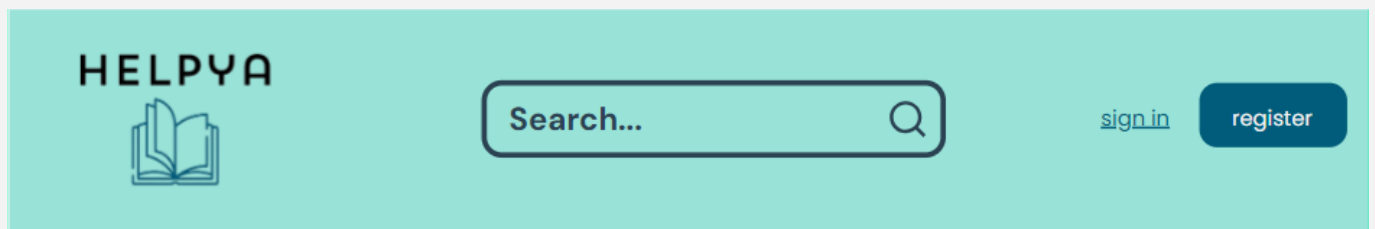

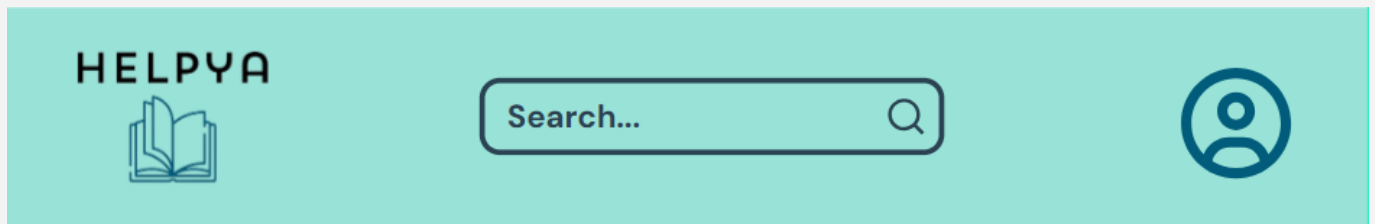

The first header we see is the header with the user registered and next we have the header when the user is not registered or logged in. Both headers have common components, the logo at left side of the header and the search bar at the middle of the header the only thing that changes is the right side of the header.

Header at phone

At the phone's header we can see some changes, the logo at left changes the display view, we don't have the search bar here and the right side doesn't change. The reason for not having the search bar on the phone is because to make it responsive the search bar occupied more space than we expected so we prefer to place it in the footer.

Header at tablet

We have here a pretty similar interface to the pc interface. We have the search bar at the middle, the logo at the left side and the right side changes when the user is logged out or not.

Web structure

Now we are going to explain the web structure on all different pages and his components. We have opted for a simple and straightforward structure that anyone can use, we did not want to take any risk because sometimes simplicity is more beautiful than complexity.

Index
